

MEASURING ALCOHOL

Read through these scenarios then answer the questions below

DAN

Dan goes to a party at his friend's house nearby. It's 7.30pm and he rushes out of the house without having any dinner. He takes 3 bottles of Smirnoff Ice and 3 bottles of Budweiser with him. By 10pm he's finished the lot. He crashes out upstairs.

MISHA

It's 6 o'clock and Misha is getting ready to go out to dinner with friends. She pours herself a couple of vodkas with orange juice. At 7pm she sits down for dinner with her friends. She shares 2 bottles of wine with 4 friends. They get through a couple of jugs of water too. Three hours later she heads home.

WHO DO YOU THINK GOT THE MOST DRUNK?

WHAT FACTORS WILL AFFECT THIS?

WHO DO YOU THINK IS LIKELY TO FEEL MORE HUNGOVER AND WHY?

IS THERE ANYTHING DAN OR MISHA COULD HAVE DONE TO STOP THEM GETTING SO DRUNK?
